RE: Business Reference for Robert Miller (RJM Conveyor Services Pty Ltd)

To Whom This May Concern,

As a third party having worked working with and alongside Bob over the past 5 years, Bob has overseen Fenner's splicing works and performed the quality control of these for a significant quantity of splices on multiple sites. Whilst Bob was not contracted by Fenner direct, but rather by our clients to oversee our splicing quality, Bob has ensured that the splicing process has been completed to the highest of standards controlling and reporting on the quality of each every one of the splices he oversaw.

These splices include splices conducted during shutdowns where Bob has worked all hours to ensure he was there at the critical times, overland conveyor splices, critical belt splices and critical belt repairs. It is important to note that not only would Bob oversee and control the splicing quality, but he would also take the time to mentor and teach the more junior splicers splicing methods to ensure safer and higher quality outcomes and Bob would ensure all safety components of the any press layout were in place and functional prior to any adding any heat or pressure.

I would have no hesitation in recommending Bob and his services to train splicing crews in achieving splice quality and efficiency and assist with any development of splice QA documentation. Should you wish to discuss this reference further I can be contacted via any of the means below.

Your Sincerely

Craig Matthews
