To Whom IT May Concern

Dear Sir/Madam,

**RE: Splicing Supervision & Quality Assurance Service Reference
Belt Type – Steel Cord and Textile Reinforced Conveyor Belt**

Please accept this letter as support and endorsement of Robert (Bob) Miller of R J M Conveyor Services Pty Ltd as a provider of QA Services in relation to the splicing of conveyor belting.

I have known Bob for over 20+ years and right from the first time I worked with him his approach has always been professional and of a high standard. In more recent times when he set-up his own company we were glad to re-engage with him and he was able to deliver all that we needed on a project in Western Australia with global miner First Quantum Minerals Limited.

For Sempertrans it was our biggest project in Australia and saw us needing to provide Splicing Supervision for 18km of Steel Cord belt onto an overland system with both horizontal and vertical curves and textile reinforced belts for some of the primary feeders that fed the overland system. At the time, access for ourselves from Europe was limited and Bob was not phased by that and fully embraced "distance-learning" to get a better understanding of our needs and Know-How.

At a local level Bob worked seamlessly in and alongside the clients' chosen contractor for the installation and splicing of the belts and fully represented our interests on the jointing procedure and the correct use of our splicing materials so as to ensure the very best splicing outcome. To date all original splices are still intact and upto the point of when the system was placed on Care & Maintenance there has not been one single issue with any splice.

The project spanned several months and Bob managed all aspects of the work so as to ensure he was available as and when the people on-site needed him. He reported all activities in a timely and professional manner and provided professional QA documentation that covered every aspect of the splicing process so that we were able to evidence that to our client and fully honour the warranty obligations we have agreed to. We would have no hesitations in using Bob services again not just in Australia but on any of our projects that we find ourselves on in any corner of the world.

Should anyone wish to discuss Bob and his work directly then please do not hesitate to contact me on either email or mobile number listed in the header above.

Yours sincerely

Alan D'Arcy
Head of Application Engineering
& Global Service for Sempertrans
